What the official record leaves out

An artificial intelligence (AI) incident can escape an English-language news monitor. A tax return can become quicker to file while taking more effort to understand. An audit recommendation can be marked complete without a service improving. Five new publications examine what public institutions need to see before they claim progress.

Consider an official reviewing complaints about an automated service. The dashboard shows few incidents. That could mean the service works well. It could also mean that people complain elsewhere, in a language the monitor does not read, or stop trying before a complaint becomes a record. The distinction affects what the official investigates and which failures receive attention.

AI incidents and public judgement

AI INCIDENTS AND PUBLIC JUDGEMENT

The language of reporting changes which AI harms become visible

Organisation for Economic Co-operation and Development · 17 November 2026
Media analysis

AI incidents and hazards in the media: Evidence from German-language coverage

WHAT THE RESEARCH SAYS

The Organisation for Economic Co-operation and Development (OECD) uses its AI Incidents and Hazards Monitor to compare German-language coverage with global reporting from June 2023 to February 2026. Across 15 themes, autonomous vehicles, intellectual property and large language models receive greater relative attention in German. Cyberattacks and fraud receive less: 9.9% of the German-language subset, against 15.4% globally.

> **Scope of the evidence**
>
> These are shares of media-reported incidents and hazards assigned to a theme, not rates of harm in Germany. Outlet selection, language and news priorities affect what enters the monitor.

THE GOVERNANCE READING

Kenya	A Kenyan regulator relying on international incident databases could miss complaints carried through Kiswahili reporting or direct service channels. A separate route for resident reports would reveal whether the apparent absence of harm reflects limited coverage.
Global South	Authorities with few analytical staff need access to local-language evidence as well as imported monitoring tools. Sharing classifications across countries can help comparison while preserving the original account and its context.
Wider significance	A global risk agenda can reflect the language and media outlets through which it is assembled. Cross-language comparison is therefore part of scrutiny of the evidence itself.

DIGITAL TAX ADMINISTRATION

Online filing can move work to the taxpayer

Chris Evans, Binh Tran-Nam and Nadia Novik; World Bank Policy Research Working Paper 11501 · 16 November 2026
Exploratory working paper

The Impact of Digitalization and Technological Development on Tax Administration, Compliance, and Complexity: An Exploratory Study

WHAT THE RESEARCH SAYS

The authors review academic and institutional literature and examine reported practices in 101 tax jurisdictions through the World Bank's Business Ready (B-READY) project. They argue that digital systems can ease filing and support compliance while introducing new administrative or regulatory complexity. Some work moves between taxpayers, advisers and the administration. The paper proposes an empirical model for future testing.

> **Scope of the evidence**
>
> The study does not estimate a common causal effect of digitalisation on compliance or complexity. Its conceptual model remains to be tested. The Bank records the paper's document date as 16 November; its reproducibility package predates publication.

THE GOVERNANCE READING

Kenya	For Kenya's revenue administration, a completed electronic return is only one part of the service. Time spent reconciling records, paying for advice or resolving an error belongs in an assessment of the taxpayer's burden.
Global South	Small firms with limited digital skills may depend on paid intermediaries even when filing is nominally free. Assisted channels and understandable requirements affect who benefits from the reform.
Wider significance	An efficiency claim needs a defined boundary. Savings within an agency can coexist with additional costs outside it, so evaluations need evidence from both sides of the transaction.

Governance Research Brief · Edition 12 · 20 November 2026

PUBLIC AUDIT AND INSTITUTIONAL LEARNING

An audit action can close while the original problem continues

Organisation for Economic Co-operation and Development · 16 November 2026
Survey and institutional analysis

Measuring Public Audit Impact and Communicating its Value

WHAT THE RESEARCH SAYS

The report finds uneven approaches to measuring public audit impact. Many audit bodies track recommendations or financial savings, while fewer assess changes in controls, organisational learning or policy. Its proposed results chain distinguishes the reports auditors produce from changes they influence through management, legislatures and other actors.

> **Scope of the evidence**
>
> The framework organises evaluation. It does not establish that audits caused every subsequent saving or service improvement. An accepted recommendation, implemented action and verified outcome remain different observations.

THE GOVERNANCE READING

Kenya	An audit follow-up can show whether an institution changed the procedure behind a recurrent finding, then examine whether the failure recurred. This keeps administrative closure separate from demonstrated improvement.
Global South	Where audit teams have limited resources, checking a sample of completed actions can be more informative than expanding an unverified list of reported implementation. Managers still need responsibility and resources to act.
Wider significance	Audit independence and honest attribution reinforce each other. An auditor can demonstrate a contribution without claiming exclusive credit for changes made by other institutions.

STATISTICS, DATA AND AI

A published number needs its definition and source

Organisation for Economic Co-operation and Development · 18 November 2026
Institutional quality framework

OECD Statistics and Data Quality Assurance Framework

WHAT THE RESEARCH SAYS

The revised framework addresses quality across the data lifecycle, including new and secondary sources, advanced analysis and artificial intelligence. It sets out principles and processes for OECD statistics, data and metadata, with continuous improvement as an institutional responsibility. National statistical authorities can use it as a reference alongside good statistical practice.

> **Scope of the evidence**
>
> This is a quality framework, not an assessment of how accurately a particular AI system performs or a new legal obligation for Kenya. Adoption alone cannot establish that a dataset is suitable for a decision.

THE GOVERNANCE READING

Kenya	When administrative records become a national indicator, the definition, missing cases and revisions affect how resources are allocated. Statistical producers and service ministries need an agreed account of those changes.
Global South	Reuse of operational or commercial data can reduce collection costs, but it may leave people outside formal systems undercounted. Quality assessment needs to examine coverage before comparing places.
Wider significance	Machine-readable access makes figures easier to reuse. Definitions and revisions must travel with the values so that automation does not turn an uncertain measure into an apparently settled fact.

NEIGHBOURHOOD SERVICES AND PUBLIC FUNDING

Residents live in one neighbourhood while funding arrives in separate streams

Organisation for Economic Co-operation and Development · 17 November 2026
Comparative policy analysis

Governing, financing and delivering area-based initiatives in neighbourhoods: From plans to places

WHAT THE RESEARCH SAYS

Building on a companion mapping of more than 40 programmes, the paper examines how governments select neighbourhoods, organise funding and connect national strategies with local delivery. Its argument is that additional money works through the arrangements around it, including partnerships, delivery capacity and meaningful participation by residents.

> **Scope of the evidence**
>
> The companion programme count is context for this analysis, not a new sample of impact evaluations. The paper does not supply a pooled estimate of benefits or establish that every place-based initiative outperforms mainstream provision.

THE GOVERNANCE READING

Kenya	A neighbourhood programme can connect national funding with local service responsibilities while leaving the legal mandates intact. Resident experience helps identify whether housing, transport and employment support reach the same people.
Global South	Short project cycles can leave partnerships without continuing staff or operating funds. The relevant design question is who sustains joint work after the initial grant.
Wider significance	Geographical targeting can make disadvantage visible, but selection boundaries also exclude people with similar needs outside the chosen area. Mainstream services remain part of the comparison.

Governance Research Brief · Edition 12 · 20 November 2026

THE GOVERNING QUESTION

The record and the experience

A regulator looking only at international news may miss a complaint made in another language. A revenue office counting completed returns may overlook the hours a small trader paid an adviser to spend on the filing. An audit committee can receive a list of completed actions without knowing whether the original failure recurred. These are limitations of particular records, rather than reasons to abandon them. Each becomes more useful when its coverage is understood.

The neighbourhood paper brings the same issue to the street. Residents experience housing, transport and employment support together, while departments may fund and assess them separately. The statistical framework offers a discipline for using those records: a figure needs its definition, source and account of revisions wherever it is reused. These readings do not demonstrate one common effect. They expose a shared responsibility in public judgement: to establish whose experience the evidence captures, where administrative work has moved and what changed after the institution reported completion.

REFLECTIONS FOR POLICY WORK

Whose experience is missing?

Does the evidence include people who use another language, need assistance or abandon the process before they appear in the completed cases?

Where did the work go?

When a digital reform saves staff time, what happens to the effort required from residents, small firms and the people who help them?

What changed after the report?

Can the institution distinguish a recommendation accepted, an action completed and a service improvement checked with users?
